

HTML

Structure

CSS

Presentation

HTML builds the page.

CSS gives it visual design.

```
structure → presentation
```

HTML: Build the Page

The structural foundation of a web page

1 **<!DOCTYPE html>**

Tells the browser that the document is an HTML5 document.

2 **<html>**

Root element containing the entire HTML document.

3 **<head>**

Contains metadata and the page title; it is not normally visible.

4 **<body>**

Contains the visible content of the web page.

5 **<h1>-<h6>**

Creates headings from the main heading to smaller headings.

6 **<p>**

Defines a paragraph of text.

7 ****

Adds an image; src gives its location and alt describes it.

HTML: Organize & Connect

Lists, links, and forms make content useful and interactive

1 LISTS

`<ul>` creates bullet lists. `<ol>` creates numbered lists. `<li>` defines each list item.

2 LINKS

`<a>` creates a hyperlink. `href` gives the destination. `target="_blank"` opens a new tab.

3 FORMS

`<form>` groups user input. `<input>` is a single-line field. `<textarea>` is for longer text.

4 MORE FORM ELEMENTS

`<button>` creates a clickable button. `<label>` describes an input field.

5 RESULT

Structured content users can read, navigate, and interact with.

CSS: Give HTML Its Visual Identity

CSS controls colors, typography, spacing, layout, and appearance

1 **INLINE**

Written inside an HTML element using `style="..."`. Best for one specific element.

2 **INTERNAL**

Written inside `<style>` in one HTML document. Styles that page.

3 **EXTERNAL**

Written in a separate `style.css` file and connected with `<link>`.

```
<link rel="stylesheet" href="style.css">

body {
  background-color: #121212;
  color: #ffffff;
  font-family: sans-serif;
}
```

CSS Selectors

Selectors decide which HTML elements receive styles

1 TAG

p, h1, body Selects all matching HTML elements. Broad scope.

2 CLASS

.card-info Selects elements sharing a class. Useful for groups.

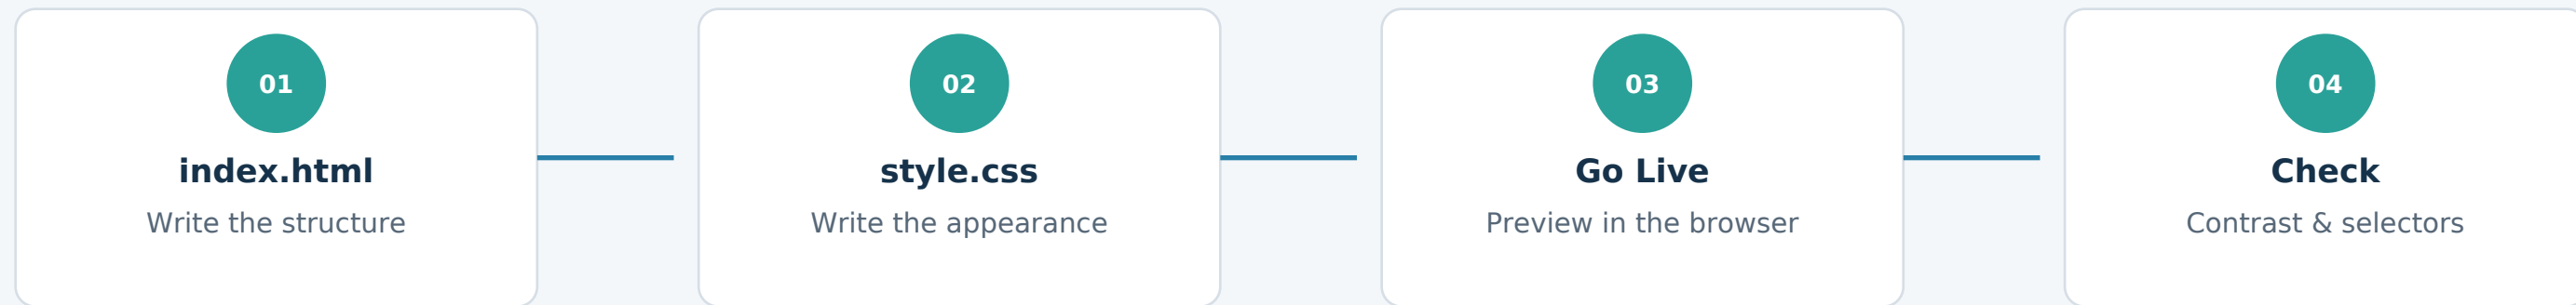

3 ID

#profile-name Targets one unique element. More specific.

```
#profile-name {  
  color: #1db954;  
  font-size: 28px;  
}  
  
.card-info { color: #b3b3b3; }
```

Put It Together

From code to a visible, styled page

```
<link rel="stylesheet" href="style.css">
```

If text disappears: check contrast and verify the stylesheet is connected.
